

# BCR Fellsmere Project

**Customer:** NuTerra

**Building Series:** MQ

**Application:** Organic Compost Processing

## The Need

Indian River County needed to convert organic waste streams into safe, valuable, and marketable end products. Using a Shelter Structures custom designed building, NuTerra enclosed the compost receiving, mixing, and processing areas within one structure.

## The Intention

The cost effective and durable 133' by 471' structure was designed to protect compost processes and simultaneously provide storage facilities. The shelter was constructed using a galvanized MQ frame and is designed to resist winds exceeding 150 mph. The exterior fabric membrane is a 28 oz. /sq. yd. PVC coated fabric and provides warranted durability, UV protection, and cost-effectiveness.

## The Solution

## We Believe in our Buildings

Shelter Structures is a specialized team of professionals created to provide innovative solutions for a wide range of high profile clients. We pride ourselves on service before and after the sale. We stand behind our buildings and will work with you every step of the way to ensure that you get the exact building solution you need. Our buildings are usually manufactured in 6-8 weeks and can be shipped anywhere in the world.
